

Divide the Fractions and Reduce to Lowest Terms

Find the reciprocal of the fraction, multiply then simplify. The first one is done for you:

$$\frac{3}{4} \div \frac{4}{5} = \frac{3}{4} \times \frac{5}{4} = \frac{15}{16} = \frac{15}{16}$$

(We don't need to simplify this fraction 15/16 is the lowest term.)

The reciprocal of 4/5 is 5/4. When you can multiply fractions, it's easy to divide fractions!
