

Silent Guardian(BOLT IOT)

Working Description

We just took one PIR sensor,one Proximity sensor ,LED,BOLT IOT platform, F-F and M-M connecting wires.

Now we are sensing the motion with PIR detector and have connected it through IFTTT which will send the mail if motion gets detected.

We have also placed proximity sensor to sense the presence of some person near the facility and the function is detected by using a LED. Connections of Proximity sensor are made without codes. It has been made direct.

Basically the proximity sensor output has been provided to a LED and if there is someone in nearby proximity than LED blew off.
