Laser Cut from Bamboo or another wood,
lightly sand and coat with lacquer.
Then wear two on adjacent rings
to get the mechanical gears effect.

TIPS FOR SIZING:

1. The laser cutter will cut away (burn) a certain amount of material to either side of the drawn line. This varies for each laser cutter but to get the sizes correct you may want to slightly scale up the drawings and then cut.
2. Sizes are US whole and half sizes (with interior dimensions in millimeters). You can scale up or down if necessary.
