

Introduction: One important skill you will need while playing Minecraft would be creating a wheat farm. Creating a wheat farm is an easy introduction to using basic inventory parts like the hoe and fence. A farm with wheat growing also makes your world look better and aesthetically pleasing. Being able to build a farm in Minecraft is a very important skill for all Minecraft platforms (PC, console, mobile, etc.)

Parts/Resource List: Hoe, seeds, fences

Step Number: 1

Step Title: Find a Location for your Farm

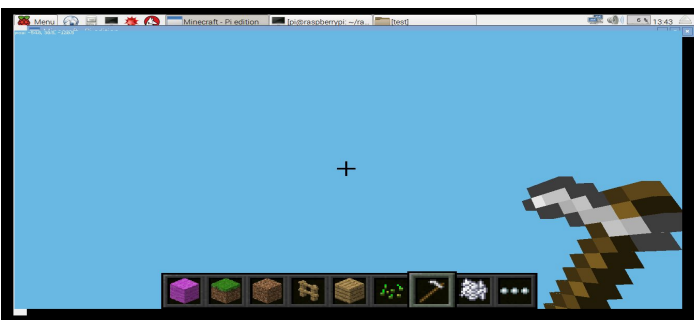

Description of Step: When building your farm, look for flat land made of grass. The size may vary depending on how big you want the farm to be, but you should pick something big enough so that you can expand if you decide to replant seeds. Your farm should be close to a source of water like a river.

Step Number: 2

Step Title: Acquire a Hoe

Description of Step: A hoe is an essential tool needed for the farm. It is used to plow the grass or ground so that you can plant the seeds. More importantly, it also allows you to obtain the seeds for your farm. You can get the hoe from your inventory. Access the inventory by pressing "E" on your keyboard and then select the hoe.

Step Number: 3

Step Title: Collect Seeds

Description of Step: To get wheat seeds you must plow the ground with the hoe. Move your hoe to the place you want to plow and then left-click on the hoe. A seed will randomly appear out of the ground for you to pick up. Repeat this several times until you get the amount of seeds you want to plant.

Step Number: 4

Step Title: Plant the Seeds

Description of Step: Plant your seeds on the plowed ground by left-clicking the ground where you want to plant the seed. The crops will then start growing. If your farm is close to a water source, the seeds will grow faster. This is because seeds will be automatically watered when you plant next to a water source.

Step Number: 5

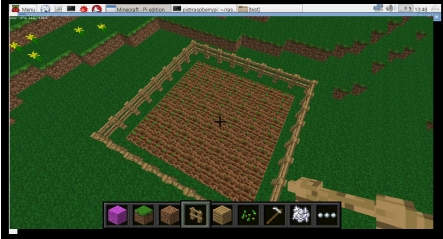

Step Title: Build a Fence

Description of Step: You can build a fence around your farm by accessing your inventory. Press "E" and select the fence. Place the fence down around your farm by left-clicking the area where you want the fence. Leave an opening in the fence so you can harvest your crops.

Step Number: 6

Step Title: Harvest Your Wheat Crop

Description of Step: Your wheat crop is ready to harvest when it's tall and yellow. You can right-click on the crop to harvest it. When you harvest the wheat, you will get more seeds which you can replant. Replant the seeds by left-clicking on the plowed dirt.
