

1. Get your 3 modules (red LED, green LED, and Button)

2. Use the Grove cables to connect them to the Grove Shield on the Arduino. Note, for this tutorial, the RED LED is connected to D2. The green LED is connected to D3. And the Button is connected to D4.

3. Using your screwdriver and some screws or rickets, secure each module to the cardboard.

4. Make sure the Arduino is connected to the laptop with a USB and we are ready to code.
