

Step 1. The corners of a sheet of paper are folded up to meet the opposite sides and (if the paper is not already square) the top is cut off, making a square sheet with diagonal creases. The four corners of the square are folded into the center.

Step 2. The resulting smaller square is turned over. The four corners are folded in a second time

Step 3 All four corners are now folded up so that the points meet in the middle. The players now work their fingers into the pockets of paper in each of the four corners.
